

The Vykon Alarm Service provides an easy, robust means to monitor and manage alarms from multiple Niagara systems through a single client interface. The Vykon Alarm Service product is a combination of a service running on the Tridium Web Supervisor server with the DatabaseService installed and a client application running on the user's PC. The Vykon Alarm Service pushes alarm and alert information to the Vykon Alarm Client over a user-configurable TCP socket. Users can monitor real-time alarms and alerts from multiple Web Supervisors through the Vykon Alarm Client application. Alarms and alerts appear in a pop-up window on the client PC. Users can review or acknowledge alarms or alerts, or hide the pop-up window. To ensure operator response to alarms, the pop-up window is set to always be on top of all other desktop applications and cannot be minimized or closed except by user command. Users run a configuration wizard to customize the display of alarm and alert attributes in the Vykon Alarm Client. The configuration wizard can also associate alarms with system graphics in a web page for easy display of graphics on alarm and can link a .wav file for audible signals on alarms and alerts. The Vykon Alarm Service monitors the connection between the client and server and indicates a loss of connection to the user.

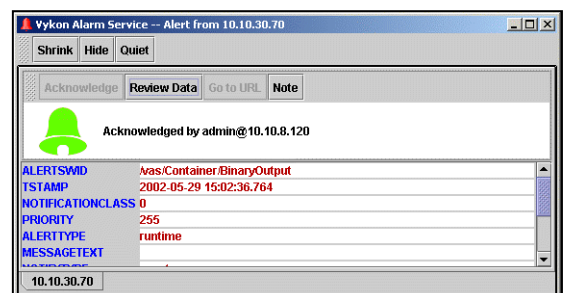

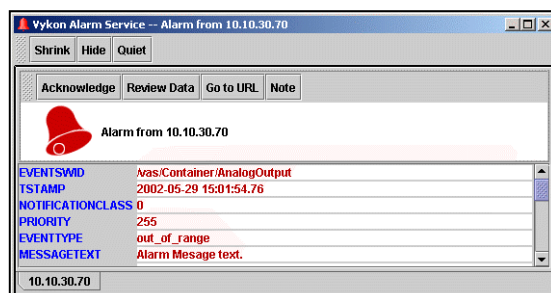

Features

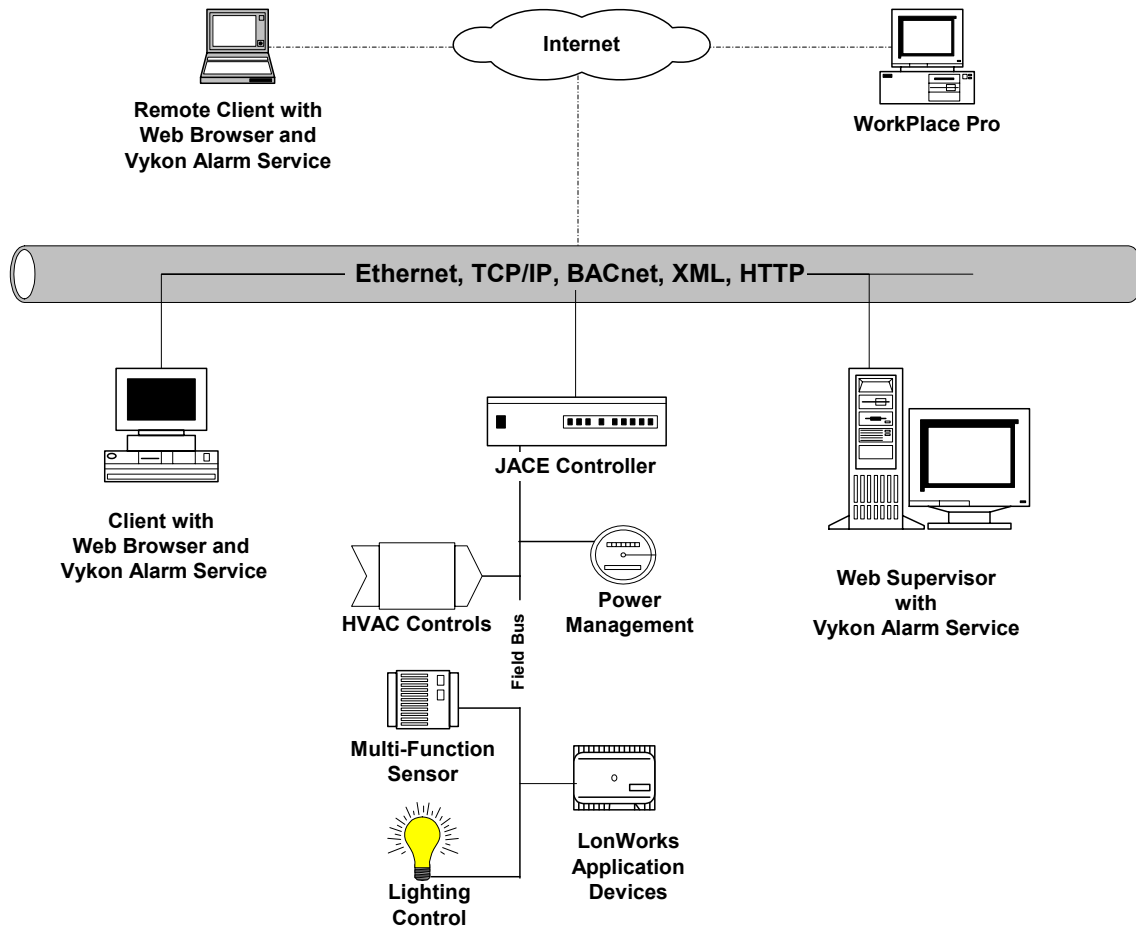

- Vykon Alarm Client application installs in the Windows system tray and monitors for an alarm from the Web Supervisor. The Vykon Alarm Client does not require an open web browser to monitor alarms.
- Vykon Alarm Client can monitor alarms from multiple Web Supervisors.
- An automatic pop-up window appears on alarm. The alarm window stays on top unless hidden by the user's manual command.
- Users can easily review and acknowledge alarms, view alarm details, go to a web page associated with the object in alarm, or hide the alarm window.
- Users can open a graphic web page linked to a specific alarm.

- User-defined alarm display table meets customers' custom alarm management needs.
- Vykon Alarm Client can filter alarms and alerts by time and date range, notification class, user's security group, and SWID.
- Vykon Alarm Client Configuration Wizard customizes the alarm display, linking graphics pages for display on alarm, and linking .wav files to alarms and alerts.
- Vykon Alarm Service actively monitors the connection between the client and server and indicates a loss of communications.

Vykon™ Alarm Service Product Data Sheet
