***Carrier And Tridium Announce The Release Of CarrierOne™, The Next Generation Controller For The Carrier Comfort Network™ Product Line***

**Richmond, VA. February 2004** – Tridium, Inc. and Carrier Corp. announce a new generation of CarrierOne™. Developed on Tridium's Niagara Framework®, Carrier's new product line has been expanded to include new controllers that provide more capacity and flexibility than ever before.

The CarrierOne product line gives customers the ability to monitor their HVAC equipment through a browser and make adjustments in real-time. Carrier customers and dealers can respond to alarm conditions quickly by using a web enabled device, which will help reduce down time while optimizing performance. In addition to the browser-based user interface, CarrierOne products enable integration with other BACnet devices as well as other communication protocols such as LonWorks, Modbus, and OPC. "The flexibility that CarrierOne provides allows us to install and support systems more efficiently," says Mark Tozzi, Controls Global Business Manager, Carrier Corp. "The fact that our systems can seamlessly interoperate with other building systems gives building owners more flexibility in choosing vendors and designing buildings."

Carrier and Tridium worked collaboratively to design and develop CarrierOne. "It has been a tremendous experience working with Carrier," said Steve Fey, Vice President of Sales for Tridium. "The CarrierOne product line has the potential to make a major impact in the market and we are very pleased to have the industry leader in air conditioning equipment as a Niagara Framework partner." The CarrierOne product line is available through the Carrier branch organization globally.

**About Carrier Corp.**

Carrier Corporation is the world's largest manufacturer of heating, air conditioning and refrigeration systems and equipment. It is a subsidiary of United Technologies Corporation (NYSE:UTX), provider of a broad range of high-technology products and support services to the aerospace and building systems industries. For more information on Carrier, visit the company's web site: [www.carrier.com](http://www.carrier.com); or contact Carrier via e-mail at [contact.carrier@carrier.utc.com](mailto:contact.carrier@carrier.utc.com) or call 1-800-CARRIER.

**About Tridium Inc.**

Tridium is the inventor of the Niagara Framework™, a software framework that integrates diverse systems and devices - regardless of manufacturer, communication standard or software - into a unified platform that can be easily managed and controlled in real time over the Internet or intranet using a standard web browser. Niagara provides many benefits across a wide variety of customer applications including: building automation, energy services, remote site management, service bureaus and maintenance management. System integrators use Niagara products to provide true open solutions without regard for specific protocols, products or technologies. Manufacturers adopt

the Niagara Framework technology to move their products to the web, reduce development time, migrate legacy systems, develop new service offerings and open up new markets.

Tridium is a privately held software company headquartered in Richmond, Va., with subsidiaries based in London and Singapore. Tridium markets its products to value-added resellers, original equipment manufacturers and a network of Tridium Systems Integrators. Additional information about Tridium is available at [www.tridium.com](http://www.tridium.com).
