

Tridium's Niagara Framework® Surpasses 200,000 Instances

Global leader in device-to enterprise integration software achieves new milestone

Richmond, Virginia – August 13, 2010 - Tridium Inc., the global leader in application software frameworks, automation infrastructure technology and device-to-enterprise integration solutions today announced that the company's Niagara Framework® has surpassed 200,000 instances worldwide. Tridium has achieved this extraordinary milestone from the continued growth in Niagara's customer base and the adoption of the framework as both a development platform and an application solution.

Meeting the needs for a strategic, general-purpose automation and information architecture built on open standards, Niagara is easily managed and controlled over the Internet with a standard web browser and integrates diverse systems and devices into a unified platform - regardless of manufacturer or communication protocol. By adopting the Niagara platform to develop Internet-enabled equipment systems, smart devices and device-to-enterprise solutions, manufacturers are able to reduce development time and costs, build new service offerings, and create new business opportunities.

"Exceeding the 200,000 mark is a true testament to the industry-leading capabilities and proven performance of the Niagara Framework," said Steve Fey, president of Tridium. "We are very excited to reach this significant milestone – one that continues to fulfill our mission of being the global leader in creating universal software frameworks that increase the functionality and value of smart devices, and connect real time operational data to the people and systems that manage business enterprises".

OEM's and system integrators throughout 45 countries use Niagara-based products to provide open, interoperable solutions without regard for specific protocols, products or technologies. Today, Niagara is deployed in a multitude of applications in the building automation, security, energy, retail, telecom, M2M and medical industries.

"We are grateful to the entire Niagara community; manufacturers, system integrators, developers, consultants and end-users who contributed to this milestone," said Marc Petock, director, global marketing and communications for Tridium. "The strong commitment from the community, as well as our ability to consistently deliver a robust platform that is the catalyst for true device-enterprise integration, connectivity and interoperability is evident in this achievement."

Niagara has created a new era in automation and control as the first universal software framework for Internet-enabled control and automation devices and the applications that support them. Niagara is making buildings better---ones that use less energy, have lower operating costs, are safer, contribute to sustainable environments and deliver significant ROI.

About Tridium Inc.

Tridium is the global leader in open platforms, application software frameworks, automation infrastructure technology, energy management and device-to-enterprise integration solutions. Our technologies extend connectivity, integration and interoperability to the millions of devices deployed in the market today and empowers manufacturers to develop intelligent equipment systems and smart devices that enable collaboration and communication between the enterprise and edge assets.

The company's Niagara Framework® is the foundation that makes buildings work and perform better. Niagara integrates, centralizes, manages and controls today's diverse business systems such as temperature, humidity, ventilation, security and energy in any size building and environment. Niagara is creating better buildings---ones that are smarter, use less energy, are more efficient, have lower operating costs, are safer and contribute to a sustainable environment.

The company is an independent business entity of Honeywell International Inc.
