

Tridium to Demonstrate Latest Release of Niagara Framework Enterprise Security Solution at ASIS 2010

Release 2.1 adds new enhancements that expand the functionality and manageability of the platform to meet today's open requirements and integration challenges

RICHMOND, VIRGINIA , October 4, 2010--Tridium will be demonstrating the latest release of its Enterprise Security solution at ASIS 2010 being held at Dallas Convention Center, October, 12-15, 2010. Tridium will be located at Booth 3283.

Built on the open and extensible architecture of Niagara^{AX} Framework[®], Niagara Enterprise Security Release 2.1 supports both small and large-scale applications that run across numerous sites, which helps to facilitate interoperability between all building systems. The end results are truly intelligent buildings that use less energy, have lower operating costs, are safer, contribute to sustainable environments and deliver significant ROI.

Niagara Enterprise Security release 2.1 adds a broad set of new support capabilities and features including:

- **Security Framework** – Improved core framework that facilitates faster time to market and reduced time to market for security focused applications.
- **Simplified Personnel Entry View**-Allows for personnel, badge and access right management on a single page versus a tabbed approach.
- **Guided Wizard Setup** -Step-by-step guided wizard to walk the user through the basic setup steps for a minimum system configuration.
- **Reports** -Several new reporting features have been added including a process to automatically schedule a report, create a PDF, and email the PDF file to a select list of email recipients. Others include Enhanced Reports by Date and Time that provides the ability to specify report ranges by both date and time of day specifications; New Cardholder Configuration Reports that provide the ability to access configuration information that list all access rights and doors assigned to an individual or group of individuals.

Niagara Enterprise Security 2.1 provides a reusable software platform for OEM partners that allows for the development and integration of various security components, including visitor management, access control, video surveillance, and intrusion. Built on the industry leading Niagara Framework[®], the security application seamlessly integrates with other building automation systems, including lighting and heating ventilation and air conditioning (HVAC) systems, elevators, fire systems, and more. OEMs benefit in cost savings, time saved in application development, time to market and resources required for development.

For building owners and end users, a security solution built using the Niagara Enterprise Security 2.1, provides unparalleled interoperability not only within traditional security environments, but also extends seamlessly to create a unified, intelligent building by integrating with today's diverse facility systems including environmental controls, lighting, energy management, fire and video. They also benefit from a common browser based user experience, a single application and single tool that contribute to increases in operational efficiencies.

"We continue to make major investments in the capabilities and scalability of our Niagara AX Framework as an enabling platform for security management solutions. Release 2.1 has something for everyone – customers, partners and developers," said Marc Petock vice president global marketing and communications for Tridium. "These new additions leverage Niagara's scalability and flexibility and provide many benefits that supports facilities security integration and automation challenges."

About Tridium Inc.

Tridium is the global leader in open platforms, application software frameworks, automation infrastructure technology, energy management and device-to-enterprise integration solutions. Our technologies extend connectivity, integration and interoperability to the millions of devices deployed in the market today and empowers manufacturers to develop intelligent equipment systems and smart devices that enable collaboration and communication between the enterprise and edge assets.

The Niagara Framework® is a software platform that integrates diverse systems and devices regardless of manufacturer, or communication protocol into a unified platform that can be easily managed and controlled in real time over the Internet using a standard web browser. By integrating today's diverse building systems such as environmental controls, security, lighting, energy, video, fire and life safety, Niagara is creating better buildings---ones that are smarter, use less energy, are more efficient, have lower operating costs, are safer and contribute to a sustainable environment. Today, there are over 207,000 instances of the Niagara Framework operating in 45 countries.

The Sedona Framework™ is the industry's first, open source development framework that provides a complete software platform for developing, deploying, integrating, and managing pervasive device applications at the lowest level. It brings the power of programmable control and the Internet down to extremely inexpensive devices. The Sedona Framework distributes decision making control and manageability to any device and brings intelligence and connectivity to the network edge and back.

The company is an independent business entity of Honeywell International Inc.
