

**FOR IMMEDIATE RELEASE**

## The Innovative Facility Solutions® team introduces 2fxconverter service and launches 2fxconverter.com e-commerce website.

Comprehensive, automated database conversion process from legacy Metasys™ systems to Facility Explorer™ FX-20/40/60 provides dramatic cost savings, convenience, and familiar user experience.

**Ellicott City, Maryland July 30th, 2009** - Innovative Facility Solutions®, a family of organizations that provide Enterprise Integration, Information Intelligence, Energy Intelligence, and Security Intelligence solutions, has launched 2fxconverter, the first commercially available conversion process from Metasys™ Network Control Module (NCM) and Network Automation Engine (NAE) databases to Facility Explorer™ FX-20/40/60 supervisory controller databases.

The 2fxconverter service is fast, convenient, and reduces project lead times while providing a true one-to-one conversion of the database point, alarm and trend objects. Familiar object names, descriptions, engineering units, alarm limits, trend parameters and other parameters are preserved. Direct costs are reduced by up to 70% compared with a manual conversion. There are also significant “Opportunity Cost” savings for integrators who utilize the 2fxconverter service, as it frees valuable engineering resources to be utilized for other more valuable tasks.

“We are very pleased with results that can be achieved with the 2fxconverter process, as it reduces cost barriers to deploying the AX Framework on legacy Metasys™ systems. We believe our contribution to the energy efficiency and *GREEN* technology movements will come through innovation of the engineering and integration processes.” said Richard Warner, President, O&M Engineering, Inc. “We have plans and envision a whole suite of solutions that will reduce the costs associated with implementing the AX Framework while enhancing the functionality for the end user.”

“We are very excited by the solutions being developed by our VYKON partners like, O&M Engineering, Inc. and think the future is wide open for the Innovative Facility Solutions® family to do great things,” said Ed Merwin, Director of VYKON Field Sales for Tridium. “It is great to see partners grasp the Tridium vision for the Niagara<sup>AX</sup> Framework and take it in directions we could have only imagined.”

The 2fxconverter service is available now from distributors throughout the USA via the <https://www.2fxconverter.com> website. Interested distributors should contact Richard Warner for more information.

### **About Innovative Facility Solutions®:**

Innovative Facility Solutions® represents a family of solution providers for the facility automation market. The solutions are strategically focused around the Enterprise Integration, Information Intelligence, Energy Intelligence, and Security Intelligence segments of the market. Innovative Facility Solutions® is a registered trademark of O&M Engineering, Inc.
