

gain a data protection advantage with niagara cloud

Providing continuity of operations and disaster recovery is critical in every industry. Cyberattacks and system failures resulting in data losses will occur. When they do, recovering from losses can be costly and time-consuming. Now, with the release of Niagara 4.3, you can give your customers peace of mind by providing them the ability to protect themselves from losing valuable Niagara station and configuration data.

The first Niagara Cloud offering available to users of Niagara 4.3 is Backup as a Service (BaaS), which provides seamless, secure and scalable backups of Niagara to the cloud – 24/7/365. With Niagara 4.3, your customers have the ability to use this service at no additional cost when they keep their Software Maintenance Agreement (SMA) current. Beginning with BaaS, SMAs will feature base options of some of the future Niagara Cloud offerings.

BaaS KEY ADVANTAGES

- 1 GB of online storage for JACE® station backups. Supervisors get 5 GB.
- Automated and on-demand backups
- Notes functionality to record details of each backup
- Secure data encryption in motion and at rest
- Ability to set up alarms for backup failure
- Geolocation to connect to nearest Niagara Cloud server with the highest priority
- Flexible backup limits so no on-demand backups are denied
- Chunked data streaming, allowing backups of near-capacity JACEs

INTRODUCING NIAGARA CLOUD

Connect, control and create like never before with Niagara Cloud. The latest advancement means you can protect the enterprise from losing valuable Niagara station and configuration data, and manage your Niagara licenses from one online location.

Backup as a Service is the first Niagara Cloud offering, but it's not the last. Stay tuned for more Niagara Cloud services that can help you leverage the Internet of Things in new and powerful ways.
